FREE3 WIRELESS PRE-ORDER AVAILABLE NOW

Sleeker. Faster. Freer.

A modern upgrade to the Free2, the **Free3** brings you the same ergonomic design and quality, with the added benefits of more speed, more buttons, better precision and optional wireless technology.

Natural feel, natural movement. An advanced sensor located underneath the rollerbar allows for more precise cursor movements without changing the feel.

Speed without compromise. RollerMouse Free3 offers greater cursor speed selection than its predecessor. Ten speeds range between 600 and 2800 dpi, allowing the cursor to move quicker and easier across multiple monitors or large screens.

Usability. RollerMouse Free3 sports more padding with its new built-in wrist rest for increased comfort. The fully open, more stable rollerbar allows for more room to move with 14" of bar access, which is our most spacious yet. Free3 is ideal for a variety of hand and body sizes and combines flawlessly with laptops for any environment.

New features for a modern take. The Free3 has two new buttons for forward and back to be used in most internet browsers. It also has a sturdier, aluminum base and a softer bar click, so not to disturb your workflow.

Slimmest design, still. At 0.9" high, the RollerMouse Free3 still boasts the lowest profile in the RollerMouse family, helping to maintain a proper, ergonomic position. Its slim design also puts it at the perfect height for use with the Balance Keyboard.

Choose between our wired or wireless version of RollerMouse Free3 to best fit your needs and the way to work.

The cursor speed button cycles through 10 dpi settings. The first 5 blue LED lights represent 600-1400 dpi and the next 5 green lights are 1600-2800 dpi. (Wireless only).

This small, wireless receiver can be securely stored in the magnetized battery housing when not in use. (Wireless only).

contour
